C  Uploading Proposal Documents

**IV GUIDELINES FOR REVIEWS OF RENEWAL PROPOSALS**

**V GUIDELINES ON REQUESTING ADDITIONAL FUNDING DURING THE GRANT PERIOD**
I General Information

These instructions describe the mandatory format of a renewal proposal and the information it must contain. This information applies to Research Training Groups whose establishment proposals were or will have been decided on by November 2021. The progress report on the first funding period must be included with your proposal as a separate attachment. In drafting the report, please follow the instructions in DFG form 54.08 “Progress Report Instructions for Research Training Groups and International Research Groups (Renewal Proposals)”.

www.dfg.de/formulare/54_08

While the progress report should provide a concise summary of the activities and results of the first 4.5-year funding period, the renewal proposal should lay out the plans for the second funding period, just as the initial proposal did for the first funding period.

Please take into account that the reviewers do not have access to the establishment proposal. Therefore, your renewal proposal and report should be self-explanatory and direct references to the first proposal should be avoided.

For International Research Training Groups (IRTGs), the proposal must be written jointly by both partner institutions. The proposal must describe the contributions and measures provided by the foreign partner institution in sufficient detail to allow evaluation.

One copy of the proposal must be sent together with the progress report to the responsible state ministry for comment.
II Proposal Submission

Proposals to renew Research Training Groups must be submitted via the DFG’s elan portal. You can access the system at

elan.dfg.de

to securely submit your renewal proposal, proposal-related data and other documents. The renewal proposal consists of the following three parts:

A – Renewal proposal data and obligations (via an electronic proposal form)
B – Project description (according to DFG form 53.61)

www.dfg.de/formulare/53_61_elan
C – Attachments (biographical sketches, progress report and any additional documents)

As soon as the data and the uploaded documents are sent electronically to the DFG, you will receive an acknowledgment of receipt by e-mail with a compliance form attached to it. This document must be signed by the spokesperson and the head(s) of the university/universities, indicating their consent to the submission of the renewal proposal, and sent to the DFG (in the case of IRTGs, only from the German side).
A Renewal Proposal Data and Obligations

An electronic proposal form is available via the DFG elan portal at

elan.dfg.de

for you to provide the following information:

- Title of the Research Training Group in German and English (max. 300 characters each)
- Planned start date
- Summary of the main intentions of the Research Training Group, i.e. especially of the research and qualification programmes, in German and English (max. 3,000 characters each)
- Research area, keywords, topical connections to other countries
- Applicant university/universities, other participating institutions (where applicable) (for IRTGs, information on the foreign partner institution)
- Funds requested
- Designated spokesperson, participating researchers (academic title, first name, last name and location) (for IRTGs, include the same information for the foreign partner institution)
- Obligations and declarations

B Project Description

For the description of your project, use the appropriate template in English or German, which is available on the elan portal and on the website of the DFG.

www.dfg.de/formulare/53_61_elan

The project description must be prefaced by a table of contents with page numbers and, optionally, a cover page. The length of the document (not including the optional cover page, table of contents and section 10 “Publications and Bibliography for the Research Programme) must not exceed 55 pages, or 65 pages for IRTGs (A4 format, Arial 11pt font or similar, single-spaced).

The project description may be written in German or English. Note that IRTG proposals should generally be written in English. Other languages should be used only after consulting with the DFG Head Office first.
The project description must address the items specified in these instructions and include all section numbers and titles as stated. Tables and charts should be included wherever appropriate. Please avoid repetition and refer instead to the relevant proposal section. Please make your proposal informative and present the information in a clear and well-organised fashion. This will help DFG reviewers make a fair and objective decision.

1 General Information

*Delete unnecessary rows or add additional rows to the table if needed.*

1.1 Applicant university/universities, other participating institutions

Indicate the applicant university that will administer the funds in the event of a grant. List additional applicant institutions where necessary.

<table>
<thead>
<tr>
<th>Name of university</th>
</tr>
</thead>
<tbody>
<tr>
<td>Applicant university with financial responsibility</td>
</tr>
<tr>
<td>[max. 1]</td>
</tr>
<tr>
<td>Additional applicant universities, if applicable</td>
</tr>
<tr>
<td>Other participating institutions, if applicable</td>
</tr>
</tbody>
</table>

For *International Research Training Groups*, specify the foreign partner institution(s) as well.

If other institutions (universities, non-university research institutions, museums, businesses, etc.) are significantly involved in the proposal by contributing substantially to the research and/or qualification programme, they may be listed here as well.

1.2 Designated spokesperson

The designated spokesperson is responsible for the proposal. The spokesperson must be able to represent the Research Training Group directly in all committees of the department as well as the university at large. He or she must therefore hold a permanent position, have all the rights and responsibilities of a full-time professor, and have the right to vote for and be elected to the university senate.
For **International Research Training Groups**, specify the spokesperson at the foreign partner institution as well.

### 1.3 Participating researchers

Name the – usually five to ten – professors who will run the Research Training Group, including their research areas. Please give appropriate consideration to diversity when composing the members of this group. Additional information can be found under [www.dfg.de/diversity/en](http://www.dfg.de/diversity/en)

<table>
<thead>
<tr>
<th>Last name, first name, academic title</th>
<th>Research area</th>
</tr>
</thead>
<tbody>
<tr>
<td>[max. 1]</td>
<td></td>
</tr>
</tbody>
</table>

If more than ten researchers are involved, an explanation must be given. The DFG strongly recommends including advanced early career researchers and giving them responsible positions within the Research Training Group. The applicant university is expected to grant such researchers the right to supervise and examine doctoral researchers.

The participating researchers are considered “individuals with a high level of scientific/academic responsibility” as stated in the DFG’s Rules of Procedure for Dealing with Scientific Misconduct[^1]. They must take note of these Rules of Procedure and acknowledge them as legally binding.

[www.dfg.de/formulare/80_02](http://www.dfg.de/formulare/80_02)

[^1]: Rules of Procedure for Dealing with Scientific Misconduct (VerfOwF), DFG form 80.01
The same applies to researchers who, in individual cases, are to be integrated as participating researchers in the Research Training Group during the course of the funding period. Requests for such additions must be submitted formally to the DFG and are evaluated during the review process.

For **International Research Training Groups**, include the information on professors and research areas for the foreign partner institution in a second table.

The appendix must include biographical sketches for all participating researchers (for **IRTGs** also those at the foreign partner institution) (see instructions on biographical sketches in appendix II.C.1).

Researchers in charge of a Research Training Group are expected to work at the same location, or for **IRTGs** at one location in each country.

If participants are based at more than one location (for **IRTGs** per country), a justification should be included. Please explain how the geographic distance between locations is taken into account in the design of the joint research and qualification programme, or refer to the relevant sections in the proposal.

### 1.4 Funding period

The period for which funding can be requested with a renewal proposal is another 4.5 years.
1.5 Proposed number of positions or fellowships for doctoral researchers, fellowships for doctoral researchers in medicine, positions for postdoctoral researchers, qualifying fellows, and student assistants

A Research Training Group includes up to 30 doctoral researchers per partner institution, 10 to 15 of whom are generally funded at the same time through the RTG. An IRTG includes up to 20 doctoral researchers per partner institution, 10 to 15 of whom on the German side are generally funded through the Research Training Group. Doctoral researchers in the Research Training Group are expected to work at the participating institutions.

For Research Training Groups whose establishment proposal was or will have been decided upon by November 2021, the individual funding duration for a doctoral researcher is generally 36 months. Accordingly, funding for doctoral researchers can be requested for up to three years each. Up to three “generations” (cohorts) of doctoral researchers can thus be funded consecutively during the corresponding RTG’s maximum 9-year duration (two funding periods of 4.5 years each).

It is also possible to apply for funding to award positions/fellowships at various intervals during the course of the RTG. If staggered cohorts are planned, provide a graphical representation of the proposed timeline of the cohorts and their individual cohort size.

Doctoral researchers in medicine can be integrated into the research and qualification programmes and receive funding during the course of their studies. Medical students can therefore receive a medical fellowship to work on their doctoral dissertation/thesis within the Research Training Group.

The quality standards that apply to externally funded doctoral researchers (for IRTGs, at least from the German side) are the same as for those funded through the Research Training Group. Except for the salary or fellowship amount, all doctoral researchers on the German side must be treated equally; they are subject to the same selection procedures and must be integrated into the Research Training Group, both formally and scientifically.
Funding for postdoctoral researchers can be requested for positions by submitting a plan that describes how they will be integrated into the RTG’s research and qualification programme and how their professional development will be supported in the RTG. On the basis of this plan, a shorter or longer duration of postdoc participation may be proposed. The specifics of the plan, which is subject to review, should be presented under 3 “Research Programme” and 5.2 “Supervision and Career Advancement”. As a rule, no more than two postdoctoral researchers can be funded simultaneously in an RTG.

Please specify in a table:

- the number of positions and/or fellowships for doctoral researchers in a cohort;
- the number of fellowships for doctoral researchers in medicine, positions for postdoctoral researchers, qualifying fellows and student assistants to be funded during the total funding period;
- the expected number of doctoral and postdoctoral researchers with funding from other sources;
- for IRTGs also the anticipated number of doctoral and postdoctoral researchers participating at the partner institution.

</table>
2 Profile of the Research Training Group

In about two pages, describe how the (International) Research Training Group plans to continue to achieve the programme objectives – excellence, innovation, internationality – and meet the requirements of the funding programme in the renewal phase (“Guidelines for Research Training Groups and International Research Training Groups”, DFG form 50.07).

www.dfg.de/formulare/50_07

Explain in particular what makes your (International) Research Training Group scientifically or academically unique, how the research programme promotes innovation, how the central research idea will be developed further in the second funding period, and what constitutes the added value of the qualification programme. Explanations may refer to the report as appropriate.

Furthermore, in view of the programme’s core research idea, describe the scientific criteria according to which the group of participating researchers has been formed or changed, and why these researchers are especially qualified to run this Research Training Group. For IRTGs, describe in particular how the participants complement each other’s expertise and what constitutes the added value of the cooperation.

3 Research Programme

3.1 Objectives and work programme

The general requirements for the research programme of an (International) Research Training Group are laid out in the “Guidelines for Research Training Groups and International Research Training Groups” (DFG form 50.07).

www.dfg.de/formulare/50_07

Please note that the renewal proposal should substantiate the viability of the research programme for an additional 4.5 years; limited references to the report are acceptable where appropriate.
Please describe the participating researchers’ shared research goals by addressing the following aspects:

- the core research idea and the Research Training Group’s resulting main focus;

- individual core research areas or individual projects and their integrative interconnection, both with each other and with the research concept at large (preferably accompanied by a schematic presentation); collaboration between the partners on core research areas or projects should be highlighted;

- the current state of relevant national and international research;

- participants’ preliminary work directly relating to the research programme. Clearly indicate when you are referring to the work of other researchers (even if you collaborated in the work yourself as a co-author). The absence of any indication may constitute a breach of good research practice, and in individual cases may constitute scientific misconduct according to the Rules of Procedure for Dealing with Scientific Misconduct (VerfOwF). (Reference may be made to the list of publications and the biographical sketches in the proposal appendix);

- potential topics for theses or a description of planned projects (where possible; where this is not possible, please provide examples);

- If the inclusion of postdoctoral researchers is planned, please explain their integration into the research programme and their scientific contributions to the RTG (including a description of possible research projects). It should be clear why these tasks and these projects should be handled by early career researchers who have already earned their doctoral degree.
- If the inclusion of qualifying fellows and/or student assistants is planned, explain their tasks and role within the research programme.

- If, in addition to the participating researchers, other researchers from the same or other universities or non-university research institutions will be involved in implementing the research programme to make a significant contribution towards it, please describe this here. Explain their importance and expertise in relation to the research programme and how they will contribute to the Research Training Group.

- For IRTGs, describe in particular the research objectives of the joint programme, the expected added value resulting from the collaboration, as well as the specifics of the cooperation between the partners on the core research areas or projects.

Please be sure to present all areas and projects in a consistent manner.

The research programme must include a list of published preliminary research relevant to the research programme in item 10.1 of the proposal; in addition, under 10.2 you may include other references on the state of the art (cf. section 10 Publications and Bibliography for the Research Programme).

3.2 **Relevance of sex, gender and/or diversity**

Where applicable, please describe briefly whether and to what extent the sex and/or gender

- of researchers
- of persons under study
- of individuals affected by the implementation of research results
- of animals under study
- with regard to samples taken from humans or animals
- in other respects

is relevant to the research project (methods, work programme, objectives, etc.).
Where applicable, please also describe briefly whether and to what extent diversity in terms of, for example, the state of health, ethnic background or culture of

- researchers
- persons under study
- individuals affected by the implementation of research results
- or diversity in other respects

may be significant for the research project (methods, work programme, objectives, etc.). Please explain to what extent these or similar considerations may also be relevant to animals under study or samples taken from humans or animals.

Additional information is available at

[www.dfg.de/diversity_dimensions](http://www.dfg.de/diversity_dimensions)

### 3.3 Supplementary information on the research context

Taking into account the relevant discipline-specific standards and ethical regulations, indicate whether you anticipate any risks and/or harm to individuals or groups and/or the potential for other negative effects that might be posed by your research. If so, how do you intend to address these issues?

If you plan to conduct experiments involving humans, including research on identifiable human material and data, animals or genetic engineering, dual research of concern, or any research covered under the Convention on Biological Diversity (CBD), please describe the ethical and legal implications of the planned experiments and note the requirements and obligations set forth in section 10. Provide a concise but sufficiently detailed explanation of the aspects listed according to their relevance. If any of the topics mentioned are of central importance to the research programme or individual areas, explain the relevant topics accordingly.

In addition, note that for any experiments involving humans, including research on identifiable human material and data, you must comply with the Declaration of Helsinki as last revised and submit corresponding statements by the responsible ethics committee at the latest prior to commencement of research.
If you are planning to conduct experiments on animals as part of the research programme, explain how the 3Rs principle (replacement, reduction and refinement) will be implemented with reference to various aspects of scientific validity. For more information on the description of research projects involving animal experiments, please refer to the publication “Animal Experimentation in Research: The 3Rs Principle and the Validity of Scientific Research”.

[URL]

For research conducted abroad involving biological materials (or associated traditional knowledge) or research on biological objects originating from outside Germany, note that such projects may be subject to the regulatory requirements of the Nagoya Protocol under the Convention on Biological Diversity and the access and benefit-sharing (ABS) portions contained therein. Guidance on conducting such projects can be found, for example, in the publication “Proposals for Research and/or Development Projects Involving Access to Genetic Resources and/or Traditional Knowledge Associated with Genetic Resources”, published by the DFG Permanent Senate Commission on Fundamental Issues of Biological Diversity.

[URL]
Please comment on the ABS requirements that affect your research programme and indicate any steps you have taken or plan to take to fulfil these requirements. Discuss the role of your cooperation partner with regard to the provider country (the country providing access to the material/traditional knowledge). Explain what materials may be transported to Germany. Note that in addition to access and benefit-sharing agreements with the provider country, a declaration of due diligence may also be required in line with the German law “Gesetz zur Umsetzung der Verpflichtungen nach dem Nagoya-Protokoll und zur Durchführung der Verordnung (EU) No 511/2014 sowie zur Änderung des Patentgesetzes”.

Please examine whether your research programme or any parts thereof involves an immediate risk of yielding knowledge, products or technology that could intentionally be misused (also by third parties) to cause substantial harm. If such a risk exists, please describe the benefits of pursuing this work weighed against the risks of potential misuse and what measures are planned to minimise these risks. Refer to the guidelines contained in the publication “Scientific Freedom and Scientific Responsibility – Recommendations on Handling Security-Relevant Research”, published by the DFG and the German National Academy of Sciences Leopoldina, 28 May 2014. If your university or research institution has a research ethics committee, consult with them prior to commencing your research work and request a statement from them.

Research must comply with foreign trade regulations (especially the War Weapons Control Act [Kriegswaffenkontrollgesetz], EC Regulation No. 428/2009 [EC Dual Use Regulation], the Foreign Trade and Payments Act [Außenwirtschaftsgesetz], the Foreign Trade and Payments Ordinance [Außenwirtschaftsverordnung] or embargo regulations) relating to the non-proliferation strategy and the handling of potentially critical goods, including technologies, software and sensitive knowledge transfer; applicants are advised to examine their projects accordingly. Information for researchers is available on the website of the German Federal Office for Economic Affairs and Export Control (BAFA)². If you require further clarification, please contact BAFA directly. For research subject to licensing, please note that licences must be obtained from the responsible authority prior to beginning research.

² https://www.bafa.de/DE/Aussenwirtschaft/Ausfuhrkontrolle/Academia/academia_node.html
If the Research Training Group will systematically generate research data or information, please explain the type, scope and documentation of the data and how they will be stored. Explain how they may be made available for reuse by other researchers. Please take into consideration any existing standards and any available data repositories or archives in your field where appropriate. Additional information and best practice examples can be found at [www.dfg.de/proposal_process/research_data](http://www.dfg.de/proposal_process/research_data).

If the reuse of the research data being generated is closely linked to research objects (such as tissues, cell lines, installations, materials, artefacts, or similar), also address the proposed storage of such objects.

4 Qualification Programme

The general requirements for the qualification programme of an (International) Research Training Group are laid out in the “Guidelines for Research Training Groups and International Research Training Groups” (DFG form 50.07).

[www.dfg.de/formulare/50_07](http://www.dfg.de/formulare/50_07)

The qualification strategy includes a qualification programme specific to the Research Training Group, a programme for visiting researchers, and any other measures that contribute, directly or indirectly, to the qualification of doctoral researchers, such as internships. For IRTGs, it also includes mutual research visits at the German and partner institution.

Please describe potential professional avenues, within and outside of academia, for researchers who have completed their doctorates within the Research Training Group, including any prospects for development in these areas over the coming years.

In the following sub-sections, you are asked to explain in detail how the qualification programme will prepare these researchers to compete successfully in these occupational fields.

---

3 Improving the handling of research data is a priority for national and international research organisations and for science in general. The DFG therefore seeks to support with its funding the safeguarding, preservation and long-term availability of research data.
For IRTGs please describe the contributions by foreign partners to elements of the joint qualification programme.

Please note that detailed plans for the qualification programme and possibly further development of the previous qualification programme are expected.

Where appropriate, limited reference may be made to the report. Please highlight changes from the first funding period.

4.1 Qualification programme

The qualification programme forms the core of the qualification strategy. It must be tailored to the research programme and support the overall objective of scientifically qualifying doctoral researchers, ensuring their interaction within and among all participating institutions. It should be designed so as not to prolong the time to degree.

The description of the qualification programme must include at least the following information:

- a table listing all courses specific to the Research Training Group, including type, duration, frequency, contents, target group, location, prospective instructor, and whether participation is compulsory for Research Training Group members; for IRTGs, list all courses to be held either locally or jointly;

- complementary courses from the universities’ general programmes or other (external) programmes, if applicable;

- key skills training courses;

- training courses on research involving animal experiments, where such experiments are part of the research programme (see also section 10);

- training courses on the collection, storage, editing and sustainable provision of research data;

- training in the principles of good scientific practice.
For help in designing such training, please consult the curriculum for courses on good scientific practice (in German), provided by the German Research Ombudsman and available at:

www.ombudsman-fuer-die-wissenschaft.de/curriculum

- Describe how the transition from the current generation of doctoral researchers to the next and the continuous integration of doctoral researchers throughout the funding period will be handled.

- If the Research Training Group will include as qualifying fellows highly qualified graduates with a bachelor’s or other degree that, according to the relevant examination regulations, is not recognised as a doctoral admission requirement, a special strategy for their qualification and integration into the Research Training Group must be presented. In addition, a statement by the university must be included confirming that doctoral admission will be granted upon successful completion of the Research Training Group’s qualification phase of up to 12 months (see also section 9.4).

- If applicable, please describe how student assistants will be integrated into the qualification programme.

- If, in addition to the participating researchers, other researchers from the same or other universities or non-university research institutions will be involved in implementing the qualification programme to make a significant contribution towards it, please describe this here. Explain their importance and expertise in relation to the qualification programme and how they will contribute to the Research Training Group.
4.2 Visiting researchers and Mercator fellows

Please explain how visiting researchers – from domestic or international universities or non-university institutions – who are not part of the Research Training Group will be integrated into the research and qualification programmes, e.g. by way of multi-day contributions to block seminars, one-day lecture visits, etc., or refer to the relevant sections of the proposal. Name the visiting researchers who will be invited. If this is not yet possible at the time of the proposal, please name examples.

If you are planning intensive and long-term exchanges with outside researchers, especially from abroad, Mercator fellows may be included (see section 7.5).

4.3 Additional qualification measures

Please describe additional measures planned to further the scientific and professional qualification of doctoral researchers, such as research visits abroad and internships at cultural institutions or businesses.

4.4 For IRTGs: Research visits to the partner institution

Longer-term coordinated research visits by doctoral researchers from both sides to the respective partner institution in Germany or abroad are a key element of International Research Training Groups (one or more visits with an overall duration of generally 6 to 12 months). Doctoral researchers from the partner institution also complete longer research stays at the university/universities and participating institutions on the German side of the IRTG. Please describe how these visits abroad will be coordinated and what objectives will be pursued, e.g. with regard to appropriate integration into doctoral training stages and into the overall research programme or ensuring local supervision.
5 Supervision and Career Advancement, Gender Equality, Organisation and Quality Management

The personnel and organisational strategies should specify the roles and responsibilities of those involved in the (International) Research Training Group and describe their cooperation in selecting doctoral and postdoctoral researchers, supervising doctoral researchers, and managing the Research Training Group in general.

Comprehensive quality management is required to guarantee the desired high standard of quality in research and qualification for the duration of the Research Training Group. Measures supporting this goal need to be built into various components of the personnel and organisational strategies (e.g. definition of responsibilities, quality-based selection process, and measures to promote gender equality at all qualification levels).

Where appropriate, limited reference may be made to the report. Please highlight changes from the first funding period.

For IRTGs, describe contributions to the proposed measures by the foreign partner.

5.1 Announcement and selection procedure

The (International) Research Training Group is responsible for filling positions and/or awarding fellowships; these should generally be announced internationally. The selection procedure should be both performance-based and transparent.

Selection criteria for doctoral researchers include the timely completion of higher education, with a qualifying degree and above-average results, as well as proven qualifications with particular relevance to the Research Training Group. Candidates should have shown motivation and an interest in research in their careers to date, and should preferably be able to demonstrate initial experience in scientific work. The doctoral training should also fit coherently into the candidate's previous professional history and future career planning.
The selection criteria for postdoctoral researchers include successful completion of a doctorate and proven specialised and methodological knowledge which particularly qualifies them to participate in the Research Training Group. It is preferable to foster individuals who come to the RTG from the outside in order to provide new impetus and expand available expertise.

- Please describe the profile of the target groups of doctoral and postdoctoral researchers to be recruited for the Research Training Group, as well as the announcement and selection procedure planned to attract these groups.

- Explain the specific procedures and criteria to be used in selecting doctoral and postdoctoral researchers.

- For IRTGs, also describe how the doctoral and postdoctoral researchers will be recruited by the partner and whether joint recruitment measures are also planned.

5.2 Supervision and career advancement

A binding supervision model is the basis for systematic, transparent and successful doctoral training and timely completion of a degree. When detailing your plans, please consider at least the following aspects:

- Supervision should be provided by at least two professors or by an advisory committee. How will advisors for individual doctoral researchers be chosen? Are there plans for joint supervision or for advisory committees? How will the supervision be organised? For IRTGs: Are the foreign partners involved in the supervision? Is adequate supervision ensured during visits to the partner institution abroad? How will researchers on the German side contribute to supervising doctoral researchers from the partner institution?
• Regular progress checks should be planned from the beginning. How, when, and by whom will they be conducted? Will performance reports be issued?

• What considerations have been made – in consultation with the university administration where applicable – with regard to cases in which doctorates are not completed within the regular 36-month funding period?

• It is expected that supervision agreements be concluded. An example of the agreement used must be included with the progress report.

• In addition to providing direct thesis supervision, Research Training Groups also aim to promote the scientific independence of their doctoral researchers. How will this independence be supported? How will doctoral researchers be integrated into the national and international research network? How will the international visibility of the research findings be ensured?

Doctoral supervision should also take into account early career planning. This includes both career paths within and outside academia. The time schedule of the doctoral project should also be considered. When planning doctoral projects, please note the 36-month standard funding duration.

Promising early career researchers should be encouraged to remain within the research system. Researchers who have completed their doctorates within the Research Training Group should therefore be enabled to define and pursue their own research topics, which they can then use as the basis for their own independent project proposals. Up to €100,000 in start-up funding may be requested per 4.5-year funding period (see section 7.8).

If you would like to apply for start-up funding, please provide a description of how these funds will be used, addressing in particular the following points:

• the criteria used to select the recipients of this funding;
- the type of Research Training Group support the selected candidates will receive for their research activities to promote their scientific independence, e.g. in terms of future proposals;

- a description of the university environment conducive to career advancement during this transition phase (including resources).

If postdoctoral researchers will be involved in the RTG and funding is requested for this purpose, please explain which RTG-specific training opportunities will be provided for them. Describe these individuals’ role within the RTG (including job description, specific responsibilities, rights and obligations of both sides). Discuss additional planned career measures, where possible integrated into the university’s programmes for early career support and staff development. Concerning the scientific contribution of postdoctoral researchers to the RTG, refer to 3 “Research Programme”. The use of these postdoctoral researchers for coordination tasks to a significant extent is not desirable. For more on this topic, see 7.3 “Module Coordination”.

Depending on the subject- and RTG-specific career development strategy, a shorter or longer participation period may be appropriate and necessary for individual postdoctoral researchers. Present your plan in this regard. The specific individual funding period is determined by the RTG on the basis of the plan and of the concrete project and career development. Explain what quality-assured decision-making processes will be established in the RTG’s organisational structure in order to make these decisions in each individual case.
5.3 Gender equality in research

Gender equality and work-life balance policies are important factors in providing successful early career support for researchers.

Please outline the measures already adopted by the applicant university and any other participating institutions to sustainably increase the share of female researchers and improve work-family balance.

Within the context of these standards, DFG member institutions annually provide quantitative data on gender equality at a standardised institutional and departmental level. Therefore, this information does not need to be included in the proposal (also refer to the DFG’s Research-Oriented Standards on Gender Equality).

www.dfg.de/gender_equality_standards

Please provide RTG-specific information on how many male and female researchers are participating or will participate at what qualification level using the following table as a template. Please take into account both DFG-funded and associated members in table A and give totals since the establishment of the Research Training Group.

* Research staff with a doctoral degree but without their own working group

In addition, please describe any specific measures to promote both gender equality and work-life balance in the Research Training Group. Please explain how these fit with and complement the measures already in place at the university. We recommend coordinating with your university’s equal opportunities officer on this issue.

Special funds may be requested to finance these measures to promote gender equality within the Research Training Group (cf. section 7.9). Regarding the specific usage guidelines for such funds, note the instructions in DFG form 1.42 (available in German only).

[www.dfg.de/formulare/1_42](http://www.dfg.de/formulare/1_42)
5.4 Organisation

The Research Training Group manages its own internal organisation. The participating researchers elect a spokesperson among themselves. The spokesperson – in the case of IRTGs, jointly with the spokesperson in the partner country – manages the Research Training Group and represents it externally. Please describe further organisational aspects, including:

- the specific modalities of management, and for IRTGs especially the cooperation between the partners;

- who will organise the qualification and visiting researcher programmes;

- what opportunities doctoral researchers will be given to help shape the Research Training Group; and

- for IRTGs, the rules according to which the doctoral degree will be granted, which institution will award it, and whether a joint doctoral degree is envisaged in addition to joint doctoral training.

5.5 Additional quality management aspects

Please describe additional components of the planned quality management strategy, with particular regard to the following questions:

- How will the development of the research programme be directed (e.g. quality-based project selection)?

- What measures are planned to optimise the qualification programme in the second funding period of the Research Training Group?

- How will relevant data (e.g. application and selection procedure statistics) be documented throughout the duration of the Research Training Group and used to initiate improvements if needed? These data will also be required for the progress report to be submitted with the renewal proposal and for the final report.
What criteria are used to evaluate the success of the Research Training Group (e.g. scientific success within an international context and the career development of researchers who have completed their degrees within the Research Training Group) and what are your standards of comparison? The criteria for success put forth in the initial establishment proposal should be addressed, supplemented and updated here.

6 Environment of the Research Training Group

6.1 Environment

The general requirements for the research environment of an (International) Research Training Group are laid out in the “Guidelines for Research Training Groups and International Research Training Groups” (DFG form 50.07).

www.dfg.de/formulare/50_07

Research Training Groups are established for a specific time period by the applicant university/universities. On the one hand, they should support the university’s research priorities and foster international networking. On the other hand, the university is expected not only to provide core support, including an appropriately equipped research environment, but also to assist the Research Training Group in various other ways.

The description of the scientific and academic environment should address issues such as the following and highlight changes from the first funding period.

- How does the Research Training Group fit into the university’s research environment and medium-term priorities? How is the Research Training Group scientifically unique compared to other local research projects with related topics?

Within this context, please describe the university’s research environment and infrastructure, e.g. cooperative arrangements with other coordinated projects such as Collaborative Research Centres, Research Units, Clusters of Excellence, as well as projects funded by federal, state, and EU programmes.

Also note the “Guidelines on the Positioning of Research Training Groups in the Context of Other Doctoral Programmes” (see DFG form 1.309).

www.dfg.de/formulare/1_309
To what extent does the Research Training Group fit into existing academic structures? Is it compatible with current exam regulations or will the regulations need to be modified? Are there other programmes for promoting early career researchers, e.g. other structured doctoral training programmes (also including those within Clusters of Excellence and Collaborative Research Centres) or graduate schools? Are specific collaborations to be established or continued from the first funding period? Is the Research Training Group integrated into a graduate school, or is this planned for the second funding period?

What constitutes the added value of the Research Training Group compared to other locally established forms of doctoral training and, if applicable, current local structured doctoral training programmes, in particular graduate schools? What structural effects can be expected from the Research Training Group?

What additional support, material or financial, will the German university provide directly to the Research Training Group, e.g. additional funding for direct-project or coordination costs, short-term positions to enable doctoral researchers to finish their degree after the maximum funding period has expired, childcare options?

How does the German university contribute to the Research Training Group’s success? Are new or tested measures planned to support the doctoral training process (e.g. through simplification of doctoral procedures for interdisciplinary projects, cross-departmental degree regulations, family-friendly doctoral training measures, or support for foreign doctoral researchers)?

The participating professors should be relieved of workload obligations adequately to compensate for their efforts in the Research Training Group. What incentive mechanisms does the German university use to actively enhance the Research Training Group’s appeal as a centre of research excellence?

Which associations and cooperative arrangements with non-university research institutions will be leveraged for the Research Training Group in the next funding period?
- How will the Research Training Group be integrated into the international research environment? Are new collaborations planned?

For IRTGs, please also describe the local conditions at the foreign partner institution, including:

- the research environment and infrastructure that will be available to the International Research Training Group;
- compatibility with existing doctoral programmes and the integration of the Research Training Group;
- other resources to be provided by the partner institution in support of the Research Training Group, e.g. staff, space and accommodations.

6.2 Distinction between the Research Training Group and a Collaborative Research Centre

The Research Training Group Module may be submitted under the Collaborative Research Centres Programme. The aim is to leverage for the Collaborative Research Centres Programme the experience gained and the structures established under the Research Training Groups Programme. A Research Training Group whose topic overlaps with a Collaborative Research Centre based at the same location can only be funded if the Research Training Group’s topic and/or structure is sufficiently unique. If your Research Training Group relates closely to a Collaborative Research Centre, please provide a detailed description of its added value.
7 Modules and Funding

Funding is provided for the entire funding period. Initially, funding is awarded for the first fiscal year and announced for the subsequent years. **Funding is tied to the fiscal year (which corresponds to a calendar year), i.e. it is not possible to carry over funds to the next fiscal year. Funds that are not used by the end of a given fiscal year are forfeited.** For rules on accounting and the use of the funds, please refer to the usage guidelines for Research Training Groups (DFG form 2.22, available in German only).

[www.dfg.de/formulare/2_22](http://www.dfg.de/formulare/2_22)

Please justify all the funding requested, if necessary by referring to other passages in the proposal, and fill in the summary table.

Submission of the **Research Training Group Module** is mandatory when proposing a Research Training Group (see section 7.1). In addition, one or more of the following modules (see sections 7.2 to 7.9) may be submitted along with it. For details, refer to the instructions on the individual modules, along with the following explanations.

7.1 Module Research Training Group

Use the Research Training Group Module (DFG form 52.15) to request funding for staff and direct project costs.

[www.dfg.de/formulare/52_15](http://www.dfg.de/formulare/52_15)

**Programme-specific instructions on 1.1 (Doctoral Researchers) and 1.2 (Doctoral Researchers in Medicine)**

Doctoral researchers may be funded through staff positions or fellowships. Doctoral researchers in medicine who are to be funded before they graduate are only eligible for fellowships.

Funding for positions can be requested under the category “Doctoral Researcher or Comparable”. The DFG generally grants funding for staff in the form of standard amounts. For rates and other details, consult the table in DFG form 60.12.

[www.dfg.de/formulare/60_12](http://www.dfg.de/formulare/60_12)

The proposed working hours must be at least 50% of a full-time position, and may be up to 100% of a full-time position if the competitive situation requires it. For more information, see DFG form 55.02 (available in German only).
Funding for fellowships can be requested under the category “Doctoral Fellowships”. The DFG awards fellowship grants according to the mandatory fellowship rates under the DFG budget. These rates and other details can be found in the usage guidelines for Research Training Groups (DFG form 2.22, available in German only).

www.dfg.de/formulare/2_22

Funding for doctoral researchers in medicine who are to be funded before they graduate can be requested under the category “Doctoral Fellowships in Medicine”. As dissertations/theses in the field of medicine are often started during the study phase, medical students may receive a fellowship in medicine to conduct doctoral research. The students must be integrated in the Research Training Group's research and qualification programme during the fellowship period. Please describe this in the appropriate sections of the proposal. Integration in the Research Training Group beyond this period is also encouraged. This is possible, for example, in admitting the doctoral researcher as an associated member of the Research Training Group. For further information, including the fellowship amount, please refer to the usage guidelines for Research Training Groups (DFG form 2.22, available in German only).

www.dfg.de/formulare/2_22

For Research Training Groups whose establishment proposal was or will have been decided upon by November 2021, the individual funding duration for a doctoral researcher is generally 36 months. Accordingly, funding for doctoral researchers can be requested for up to three years each. Up to three “generations” (cohorts) of doctoral researchers can thus be funded consecutively during the RTG’s maximum 9-year duration (two funding periods of 4.5 years each). It is also possible to apply for funding to award positions/fellowships at various intervals during the course of the RTG.

Funding for doctoral researchers whose individual maximum 36-month standard funding duration did not end during the first funding period can continue using funds from the RTG’s second funding period. If the Research Training Group is not approved for a second funding period, please note the regulations on completion funding in DFG form 2.22 (available in German only).
Please state the number and duration of positions or fellowships to be awarded to doctoral researchers and the working hours as a percentage of full time/fellowship amounts.

Please justify your decision for requests for positions (including the number of working hours) or fellowships (including fellowship amounts). In this context, the subject-specific funding modalities for doctoral researchers, within the academic environment of the Research Training Group as well as in national and international comparison, are relevant. For more information, see: www.dfg.de/formulare/55_02

Please explain briefly why the proposed number of doctoral researchers should be funded, referring to the research programme where applicable.

Programme-specific instructions on 1.3 (Postdoctoral Researchers)
Funding requests for postdoctoral researchers require a specific plan that specifies how postdocs will be integrated into the RTG’s research and qualification programme and how their professional development will be supported in the RTG. Relevant explanations should be provided in 3 “Research Programme” and 5.2 “Supervision and Career Advancement”. As a rule, no more than two early career researchers can be funded simultaneously in an RTG.

Postdoctoral funding can be requested for positions for a period of up to 54 months. Depending on the subject- and RTG-specific career development strategy, a shorter or longer participation period may be appropriate and necessary for individual postdoctoral researchers.

Funding for positions can be requested under the category “Postdoctoral Researcher or Comparable”. The DFG generally grants funding for staff in the form of standard amounts. For rates and other details, consult the table in DFG form 60.12.

Please state the number of positions to be funded for postdoctoral researchers and the requested funding duration.
Programme-specific instructions on 1.4 (Qualifying Fellowships)
Please state the number of fellowships to be funded and the requested funding duration.

Refer to the parts of the proposal where the special qualification programme for qualifying fellows is described, as well as to the included statement from the university confirming that doctoral admission will be granted upon successful completion of the qualification programme (cf. 4.1 and 9.4).

Programme-specific instructions on 1.5 (Student Assistants) (Support Staff)
Support staff should be introduced in a targeted manner to independent scientific working practices in the Research Training Group. Please describe how they will be integrated into the research programme and, if applicable, into any research projects already planned, as well as into the qualification programme. Their work in the Research Training Group should not prolong their studies; they should therefore work no more than 10 hours per week. Work schedules in excess of 10 hours per week must be specially justified.

- Please give the number of support staff (student assistants) to be funded. State the total amount requested, the planned number of monthly working hours, the length of employment for each position, and the hourly pay rate (according to applicable state or federal law) upon which your calculations are based.

- Taking into consideration the instructions above, describe the involvement of the support staff (student assistants) in the Research Training Group, or refer to the relevant part(s) of the proposal.

Programme-specific instructions on 2. (Funding for Direct Project Costs)
For each category of requested funding for direct project costs (Research Training Group Module 2.1 to 2.6), please state the amount of funds required, how the funds will be used, and how the amount has been calculated. Please refer to the programme-specific instructions provided in 2.2 to 2.6.
Programme-specific instructions on 2.2 (Travel)

Travel funding may be requested for doctoral and postdoctoral researchers to participate in conferences, meetings or similar as well as for archive, laboratory and similar guest and research stays.

When calculating the maintenance costs for fellowship holders’ visits abroad lasting longer than 30 days, please refer to the DFG’s foreign allowances (incl. possible purchasing power compensation), which can be determined using the foreign allowance calculator on the DFG website.

www.dfg.de/en/research_funding/programmes/coordinated_programmes/research_training_groups/facts_figures/foreign_allowances/index.jsp

These rates do not apply to those with staff positions, although they may serve as a basis for calculating the budget for trips abroad by those doctoral researchers as well. Otherwise, the funding of staff travel expenses falls under the relevant laws on travel expenses.

If carbon dioxide emissions are generated from such business travel, these can be offset by purchasing CO₂ certificates. The spokesperson and the university are responsible for the legal aspects of acquiring the CO₂ certificates. Funds required for this purpose can be requested as part of travel expenses. For more information, please refer to DFG form 71.03 (Merkblatt zur Umsetzung der CO₂-Kompensationregelung), which is available in German only.

www.dfg.de/formulare/71_03

Programme-specific instructions on 2.3 (Visiting Researchers)

Funding may be requested for lectures or visits by highly qualified visiting researchers who will make a significant contribution to the research and/or qualification programme. The remuneration of the visiting researchers, including the amount of the standard honourarium, must be in accordance with the regulations applicable at the host institution.

Programme-specific instructions on 2.4 (Experimental Animals)

If your project requires funding to purchase, breed and keep experimental animals, please state and justify the requested amount. Provide a cost estimate that includes the number of animals required and the duration of housing. Please justify the number of
animals, taking into account the 3Rs principle and scientific validity, or refer to the relevant section in the proposal (see also “Animal Experimentation in Research: The 3Rs Principle and the Validity of Scientific Research”).

In calculating the costs for keeping mice and rats, please note the relevant DFG guidelines in DFG form 55.03, available in German only.

www.dfg.de/formulare/55_03

Programme-specific instructions on 2.5 (Other)
Funding may be requested for user fees for major instrumentation and core research facilities. The DFG can only cover such costs that are required specifically for the project. Basic funding for the individual instruments or core facilities must be financed through the institution’s core support. Further information can be found in DFG form 55.04, available in German only.

www.dfg.de/formulare/55_04

Programme-specific instructions on 2.6 (Publications)
Per funding period, publication funding of up to €20,000 can be requested.
7.2 Module Replacements

If your Research Training Group requires that any of the responsible professors be released from teaching or administrative duties, the Research Training Group’s spokesperson or the host university can use this module to request funding for replacements to take over these responsibilities.

www.dfg.de/formulare/52_03/

Programme-specific instructions

In Research Training Groups, funding for replacements serves to relieve the responsible professors of workload obligations to allow them to work as principal investigators on Research Training Group projects. Professors are required to continue to meet their responsibilities within the Research Training Group during the replacement period. The funding request can be submitted with the renewal proposal or as a supplementary proposal while the Research Training Group is in progress. A maximum of four proposals for replacement costs can be granted per funding period.

Please describe the research project and its current status and provide details of the approach you are planning to take during the proposal period and the methods which are to be used to carry out the project. With reference to your teaching and administrative workloads, explain why releasing you from such duties is necessary to allow the project to be carried out within the framework of the Research Training Group. Also state the amount of time you will spend on working with the Research Training Group. If members of the Research Training Group have already had replacement costs approved by the DFG, please list their names and the replacement periods.

If you will be requesting replacement funding through this module in a supplementary proposal, please include with the proposal a summary of not more than 15 lines, if possible, in which you describe the key intentions of the project you are planning. This summary will be used to provide information to the interdisciplinary decision-making bodies at the DFG. The supplementary proposal for replacement funding should also include the biographical sketch of the relevant person in accordance with section C.1.

If funds are granted, a report on the progress and findings achieved by the project must be submitted with the Research Training Group’s final report.
7.3 Module Coordination

Funding can be requested to coordinate administrative tasks within the Research Training Group and, where applicable, for gender inclusion funding for the spokesperson.

Programme-specific instructions
Coordination funding can only be used for personnel who are necessary for the administrative coordination of the Research Training Group but are not involved in attaining its scientific objectives. Scientific staff should not assume a significant amount of administrative tasks and may not be financed via coordination funds.

This module can also be used to request gender inclusion funding for individual and subject and/or project-related activities serving to facilitate the spokesperson’s role. To be eligible for and to take up such funding, only spokespersons whose gender is underrepresented at the management level in their fields can apply for such funds.

Additional information can be found in DFG form 52.12 “Module Coordination”.
www.dfg.de/formulare/52_12

7.4 Module Temporary Substitutes for Clinicians

If physicians and/or licenced psychologists are to perform scientific tasks in a Research Training Group’s research and qualification programme, funding may be requested for staff to take over their patient-care responsibilities. This is also a way to (re-)involve early career physicians in research.

www.dfg.de/formulare/52_04

Programme-specific instructions
Please describe – if necessary also with reference to other parts of the proposal – your model for such a substitute programme in the Research Training Group, explaining both the content and the form of the programme. Funding can be requested either in conjunction with the proposal to establish a Research Training Group or as part of the renewal proposal. It is not possible to submit a supplementary proposal while the Research Training Group is in progress.
7.5 Module Mercator Fellows

This module enables the Research Training Group to request funding for intensive and long-term cooperation with researchers in Germany and especially those from abroad, beyond the scope of typical research visits. Fellows will partially be on site but will remain in contact with the Research Training Group even after their stay.

www.dfg.de/formulare/52_05

Programme-specific instructions
The significance of the Mercator fellows for the Research Training Group and their role and activities in the research and qualification programmes should be explained in item 4.2 “Visiting researchers and Mercator fellows”.

7.6 Module Project-Specific Workshops

Use this module to request funds for workshops, colloquia, networking meetings of Research Training Groups with similar topics, etc. to be conducted as part of the Research Training Group.

www.dfg.de/formulare/52_06

Programme-specific instructions
In Research Training Groups, these events are part of the qualification programme. The concept should be explained in more detail under item 4.1 “Qualification programme”.

Funding to cover the travel and maintenance expenses of participating researchers can only be provided for organising or holding internal RTG events that are offered within the qualification programme, which is why such funding can only be requested within this module.

If carbon dioxide emissions are generated within this context by necessary business travel by members of the Research Training Group or participating researchers, these can be offset by purchasing CO₂ certificates. The spokesperson and the university/universities are responsible for the legal aspects of acquiring the CO₂ certificates. Funds required for this purpose can be requested as part of travel expenses. For more information, please refer to DFG form 71.03 (Merkblatt zur Umsetzung der CO₂-Kompensationregelung), which is available in German only.

www.dfg.de/formulare/71_03
7.7 **Module Public Relations**

To enable the Research Training Group to present its work to the general lay public, you can request funding for public relations

www.dfg.de/formulare/52_07

7.8 **Module Start-Up Funding**

Through this module, research networks can receive funds to help promising early career researchers pursue independent projects.

www.dfg.de/formulare/52_11

**Programme-specific instructions**

In Research Training Groups, this type of funding is intended to support researchers who have completed their doctorates within the Research Training Group, e.g. in developing their own independent project proposals. When requesting start-up funding, the intended use of funds (positions (hours as percentage of full time), direct project costs, etc.) must be outlined and the underlying plan must be presented under item 5.2 “Supervision and career advancement”.

7.9 **Module Standard Allowance for Gender Equality Measures**

This module can be used to request funds for targeted measures to promote gender equality in science and academia and to make jobs in science and academia more family friendly.

www.dfg.de/formulare/52_14

**Programme-specific instructions**

In the proposal to either establish or renew a Research Training Group, up to €15,000 per year may be requested as a lump sum for this purpose. If necessary, the sum may be distributed unevenly over the funding period. Once funds have been approved, they may not be shifted to other fiscal years.

The need for funding should be outlined briefly with reference to item 5.3 by describing the planned measures, how they are tailored to suit the needs of the Research Training Group, and their relationship to the university’s existing equal-opportunity measures.
Additional information can be found in the infosheet on gender equality measures in Research Training Groups (DFG form 1.42, available in German only).

www.dfg.de/formulare/1_42
Tables: Summary of modules and items submitted for funding

Please remember that the funds are tied to specific fiscal years and cannot be carried over to subsequent fiscal years.

You may add additional lines as necessary (for example for showing positions or fellowships that cover multiple periods or to show different generations of doctoral researchers).

Items that cannot be funded include:

- compensation for the Research Training Group’s participating researchers;
- travel by the professors who run the Research Training Group, except for trips to organise and hold courses as part of the qualification programme or to collaborate with foreign partners;
- construction, furnishings, rent;
- staff and equipment considered contemporary core support;
- general furnishings and equipment (including office materials, fax machines, computer equipment, etc.);
- use of the university’s central services (e.g. computer centres, scientific or other services) on the basis of the university’s internal cost allocation;
- tuition fees at the universities involved in the Research Training Group;
- operating costs and maintenance, bureaucratic fees of any kind (this does not include private fees such as conference fees);
- costs arising from the operation of DFG-funded equipment (e.g. energy costs, repair and maintenance, ongoing technical support);
- expert and court fees, insurance, telephone charges, postage, account maintenance fees;
- value-added tax to the extent that it can be deducted as input tax.

The host institution is expected to provide core support, including appropriate office and laboratory space and equipment.

For usage guidelines, please refer to DFG form 2.22 (available in German only).

www.dfg.de/formulare/2_22
8 Only for International Research Training Groups: Complementary Funding by the Partner Institution

For IRTGs, only the German partner university can request DFG funding to cover its project-specific expenses. The foreign partner must guarantee and substantiate complementary funding of the International Research Training Group for the proposed funding period. The IRTG proposal must therefore include a detailed overview of any and all existing, requested and/or awarded funds. Please give a tabular overview, broken down by calendar years, of the funds that the partner institution will or should have available for the following purposes:

- basic funding for the doctoral researchers at the foreign partner institution,
- funds for visits abroad by participating doctoral researchers,
- additional funds for joint activities,
- if applicable, waiver of tuition fees for the doctoral researchers from the German partner university, etc.

Please specify the funding source in each case (e.g. foreign funding agency or host university or institution).

9 Declarations

9.1 Connections to Collaborative Research Centres

If there is a topical connection between the Research Training Group and a Collaborative Research Centre at the same location, a statement by the Collaborative Research Centre on the intended mode of coordination between the two institutions must accompany the proposal. Please refer in this section to the declaration to be provided in the appendix of the proposal. Consider the distinction required as per item 6.2.

9.2 Collaboration with other partners

If you mention specific cooperative arrangements with other local partners (Graduate Schools, Research Units, etc.) in item 6.1, it is recommended that declarations by the cooperating institutions be included with the proposal.
9.3 Cooperation with industrial, commercial or service enterprises

If close collaboration between the Research Training Group and industrial, commercial or service enterprises is planned, a cooperation agreement must be concluded. This cooperation agreement should particularly set the terms for the commercial exploitation of research results and for the publication of findings. A copy of the cooperation agreement agreed upon by all parties must be submitted together with the proposal so it can be reviewed by the DFG Head Office. We recommend using the DFG model agreement (DFG form 41.026e).

www.dfg.de/formulare/41_026e

9.4 Doctoral admission of qualifying fellows

If fellowships for qualification students are requested, a statement from the university must be submitted confirming that doctoral admission will be granted upon the successful completion of the (maximum 12-month) qualification phase in the Research Training Group and that appropriate fast-track qualification and/or doctoral programme structures exist or will be established. Please include this statement in the appendix.

9.5 Proposal submission to other funding organisations

If you have already requested funding for this Research Training Group from other organisations, please mention this here.

9.6 Only for International Research Training Groups: Letter of intent from the partner

Please refer to the partner’s binding letter of intent, which must be included in the appendix. The letter must be signed by the partner’s spokesperson and the head of the partner institution. In this letter, the head of the partner institution agrees to support the planned cooperation and to provide the required infrastructure.

10 Publications and Bibliography for the Research Programme

Information under this item does not count against the maximum allowable number of pages.

10.1 List of published preliminary research relevant to the research programme

Please list publications by the participating researchers whose topics are directly related to the research programme and/or works relating directly to the Research Training Group
that were published during the first funding period. Alphabetise them by the last names of the participating researchers and indicate whether they are

a) articles which at the time of proposal submission have been published or officially accepted by publication outlets with scientific quality assurance, and book publications;

b) other publications.

Please note that the total number of items that may be listed under a) and b) combined is **limited to ten** for each participating researcher. Authorship must be cited unchanged and in accordance with how it appears on the published works. Please number the listed items.

In addition, an unlimited number of patents may be listed (categorised into pending and issued).

For publications that are only available electronically, please also provide a persistent identifier (e.g. a digital object identifier [DOI]), preferably by indicating the DOI number or otherwise by specifying the URL. For publications that are not published exclusively in electronic format, we recommend that you include a persistent identifier or a URL; note, however, that this is optional.

When listing works that have been officially accepted for publication but not yet published, the manuscript and the publisher’s dated acknowledgement of acceptance must be submitted in the appendix. Manuscripts in progress and papers that have not been officially accepted for publication may not be included.

This list is essential to the review. Please note that the DFG may reject any proposals not in compliance with the rules on publication lists.
10.2 Additional references on the state of the art (optional)

The presentation of the research programme should be able to stand on its own and be understandable, coherent and reviewable without the need to read additional documents. For a more comprehensive presentation of the current state of the art, additional works (by the participating researchers and/or others) may be cited here. To the extent that these are non-published works by the participating researchers, they must be submitted in the proposal appendix. On the day of the on-site review, additional publications and manuscripts may be made available to the review panel. However, any additional documents submitted in support of the proposal are not subject to evaluation; reviewers may read them at their own discretion.
C Appendices

1 Biographical Sketches of Participating Researchers

Biographical sketches for the participating researchers (for IRTGs also those participating at the foreign partner university) must be compiled into one PDF file and submitted in the appendix. If individual employment contracts will end during the requested duration of the Research Training Group, this must be stated. To enable reviewers to assess a researcher’s scientific track record appropriately, it is recommended that biographical sketches (including date of birth, education and training, prior research activities, etc.) indicate any circumstances that may have impaired scientific work. Researchers may therefore mention any periods during which they were unable to work continuously, e.g. due to childcare obligations, prolonged illness or disability. The below-mentioned five-year periods with respect to supervised theses and participation in projects with third-party funding are extended by two years for each child.

Each biographical sketch must include a list of the researcher’s ten most important publications. These publications need not be related to the proposed Research Training Group.

Please structure each list of publications as follows:

a) articles which at the time of proposal submission have been published or officially accepted by publication outlets with scientific quality assurance, and book publications;

b) other publications.

Please note that the total number of items that may be listed under a) and b) combined is limited to ten per person. Authorship must be cited unchanged and in accordance with how it appears on the published works. Please number the listed items.

In addition, an unlimited number of patents may be listed (categorised into pending and issued).
For publications that are only available electronically, please also provide a persistent
identifier (e.g. a digital object identifier [DOI]), preferably by indicating the DOI number
or otherwise by specifying the URL. For publications that are not published exclusively
in electronic format, we recommend that you include a persistent identifier or a URL;
note, however, that this is optional.

When listing works that have been officially accepted for publication but not yet pub-
lished, the manuscript and the publisher’s dated acknowledgement of acceptance must
be submitted on CD. Manuscripts in progress and papers that have not been officially
accepted for publication may not be included.

Furthermore, the biographical sketches of the participating researchers must document
any training of early career researchers within the last five years, including a list of
theses supervised (with time to degree and, where possible, information on the doctoral
graduates’ further career development). In addition, participants (for IRTGs at least those
on the German side) should list key projects in which they were involved in within the
last five years that received third-party funding, indicating projects relevant to the Re-
search Training Group.

2 Progress Report

The progress report on the first funding period must be included with your proposal as a
separate attachment. Additional information on the structure and content of the report is
contained in the “Progress Report Instructions for Research Training Groups and Inter-
national Research Groups (Renewal Proposals)” (DFG form 54.08).

www.dfg.de/formulare/54_08

3 Additional Attachments

The following additional documents should be attached to the proposal as appropriate:
works included in the list of publications that have been officially accepted for publication
but not yet published with acknowledgement of acceptance and a cover letter addressed
to the DFG Head Office. In addition, declarations in conjunction with items 9.1 to 9.6
must also be included, as well as a sample supervision agreement. Do not include any
additional documents.
III Supplementary Proposal Instructions

A. Obligations

In submitting a proposal to the DFG, the applicant university and the participating researchers agree to

1. adhere to the principles of good scientific practice

   The principles of good scientific practice include, among others: maintaining professional standards, maintaining strict honesty with regard to one's own contributions and those of third parties, documenting results and rigorously questioning all findings.

2. recognise the DFG's Rules of Procedure for Dealing with Scientific Misconduct (Verfahrensordnung zum Umgang mit wissenschaftlichem Fehlverhalten – VerfOwF) as legally binding

   The spokesperson retains the signed Declarations of Obligation of Compliance provided by the participating researchers.

   www.dfg.de/formulare/80_02

   These remain on file at the institution(s) for ten years after the end of the last funding period and, should allegations of scientific misconduct arise, must be submitted to the DFG Head Office upon request.

B. Data Protection

Please note the DFG's data protection notice on research funding, which can be viewed and downloaded at www.dfg.de/privacy_policy. If necessary, please also forward this information to those individuals whose data will be processed by the DFG due to their involvement in your project.

   www.dfg.de/privacy_policy

---

4 The principles of good scientific practice are presented in detail in the DFG Code of Conduct Guidelines for Safeguarding Good Scientific Practice.

5 Rules of Procedure for Dealing with Scientific Misconduct (VerfOwF), DFG form 80.01.
C. Uploading Proposal Documents

Before submitting your proposal, you will be prompted to upload the required documents. You can only upload PDF files as attachments (which should have no access restrictions regarding reading, copying or printing). Please name the PDF documents according to the following naming protocol in order to facilitate the processing of your proposal.

<table>
<thead>
<tr>
<th>Document</th>
<th>Document name</th>
</tr>
</thead>
<tbody>
<tr>
<td>project description (Beschreibung des Vorhabens) (part B of the proposal)</td>
<td>Beschreibung_des_Vorhabens</td>
</tr>
<tr>

<tr>
<td>for IRTG: partner’s letter of intent (Kooperationserklärung der Partner)</td>
<td>&lt;partner_letter_of_intent&gt;</td>
</tr>
</tbody>
</table>

Files larger than 10 MB cannot be submitted. If a larger file size is unavoidable, you may provide the file subsequently on a suitable medium. In this case, submit an explanatory note instead of the missing document.
IV Guidelines for Reviews of Renewal Proposals

A proposal to renew a Research Training Group is generally reviewed on site at the applicant university. The reviewers form their judgment on the basis of the written information contained in the proposal and the presentation by the Research Training Group.

Information on review criteria can be found in the “Guidelines for Reviewing Renewal Proposals for Research Training Groups or International Research Training Groups” (DFG form 1.307).

www.dfg.de/formulare/1_307

1. Objectives and Participants

The main purpose of the review is to provide an opportunity not only for expert reviewers, but also for a scientific member of the Grants Committee on Research Training Groups and for the DFG Head Office to gain an impression of the results achieved by the Research Training Group to date, the implementation of the qualification programme, the research and structural impact of the Research Training Group, and the resources at its disposal. At the same time the university’s administration is given the opportunity to describe how the Research Training Group helps define the profile of the host institution and how the university supports the Research Training Group.

The task of the scientific member of the Grants Committee on Research Training Groups (rapporteur) is primarily to present the reviewers’ findings to the DFG’s decision-making bodies. In addition, together with the DFG Head Office, the rapporteur is responsible for ensuring that the DFG’s criteria for evaluating Research Training Groups are applied during the review.

The reviewers and the rapporteur can also advise the Research Training Group on the further design of the research and qualification programmes and make recommendations for other activities.

The review provides an opportunity for all those involved in the Research Training Group, including the host university, to pass on comments and queries to the DFG.
In addition to the reviewers and the Grants Committee member, one representative each from the relevant state and federal ministries may also participate in the on-site review. As governmental committee members they represent the main backers of the DFG’s funding programmes and have an interest in learning about the impact of government-funded research grants.

For the applicant university, especially the professors who formulated the proposal must be present. The doctoral and postdoctoral researchers who – with or without the financial support of the Research Training Group – are involved in its work are also required to attend, as are the student assistants (support staff) funded by the Research Training Group. It is expected that the group’s former and current doctoral researchers be represented as completely as possible. For IRTGs, this also applies to the doctoral researchers from the partner institution.

It is also expected that professors from the foreign partner university, especially the spokesperson, participate in the review; this enables them to underscore their active involvement.

As structural aspects play an important part in the continuation of a Research Training Group, it is also very helpful if the university, as the applicant, is also represented by a member of its administration. In order to accommodate their scheduling, they should be invited specifically to attend the discussion with the Research Training Group.

Furthermore, representatives of institutions with which (continued) close research and/or structural collaborations are planned should also participate in the review, such as existing graduate institutions with other sources of funding (e.g. graduate schools or Research Training Groups integrated into existing Collaborative Research Centres), non-university research institutions and other cooperation partners.
2. **Review Schedule**

The review is generally scheduled as a two-day event. The exact schedule should be determined in consultation between the applicants and the DFG Head Office. The DFG will send the schedule to all external participants as soon as possible but no later than two weeks prior to the event.

**Therefore, please discuss the agenda well in advance with the DFG Head Office.**

The following agenda is provided as an initial orientation for creating a schedule. The programme elements and their duration and sequence are pre-defined. The starting time is flexible. Which parts of the review should take place on the first day and which on the second day is decided in consultation with the DFG Head Office. In most cases, it is recommended to begin the review on the first day at 2:00 pm and allow a 15-minute break between the internal preliminary discussion and the welcome and introduction by the spokesperson. Depending on the arrangement of the agenda over the various days, an additional coffee break can be scheduled. Please note that the plenary discussion involving all members of the Research Training Group and representatives of the university administration must be at a fixed time to ensure that the university administration participates.

**45 min**  **Internal preliminary discussions by the reviewers**  
*(Reviewers, rapporteur, DFG Head Office staff)*

It is usually helpful if non-local participants are picked up from the hotel or train station and brought to the meeting location by someone familiar with the area.

**15 min**  **Welcome and introduction by the spokesperson of the Research Training Group**  
*(Open to all members of the university, reviewers, rapporteur, representative of the state ministry, university administration, representatives of university or non-university partners if applicable, DFG Head Office staff)*
The spokesperson should give a brief introductory statement highlighting the Research Training Group’s most noteworthy results, as well as any major changes. Particular mention should be made of current developments that were not taken into account in the written proposal. It may be pertinent to include comments on the recommendations made during the previous review.

3 hours

Presentation of the Research Training Group and discussion

(Open to all members of the university, reviewers, rapporteur, representative of the state ministry, university administration, representatives of university or non-university partners if applicable, DFG Head Office staff)

The Research Training Group is responsible for moderating the presentations that follow. As different types of presentation are usually appropriate for different disciplines, the Research Training Group may select one of three different forms to be used by the doctoral and postdoctoral researchers when giving their presentations:

1. oral presentations
2. poster presentations
3. a combination of both oral and poster presentations

Please ensure that all doctoral researchers who have spent a sufficient amount of time working on their theses/dissertations are included in the presentation. The presentation should also include as many doctoral researchers as possible whose funding periods have already ended. If postdoctoral researchers were/are integrated, they should also present their work. Where appropriate, student assistants should also be invited to participate in the presentation. Doctoral researchers from the partner university should present their work as well.

Against this background, please consider the following points regarding each of the three presentation options:

Option 1: If the Research Training Group decides in favour of giving oral presentations, please note that the reviewers should have the opportunity to
select the presentations they would like to hear. A list of topics by doctoral researchers who have spent a longer period of time working on their dissertations should be sent to review members prior to the meeting for this purpose. The Research Training Group may decide on the length of individual presentations and the ensuing discussion. Sufficient time should be allowed for at least five doctoral researchers to give their presentations.

**Option 2:** For poster presentations, please ensure that all doctoral researchers and, where appropriate, postdoctoral researchers, are present and available to discuss their presentations with the reviewers.

**Option 3:** If the Research Training Group elects to use a combination of oral and poster presentations, the Research Training Group must select the presentations to be given. To give reviewers sufficient time for discussions with all those presenting their projects, please limit the number of oral presentations to three as a rule. The maximum total time allotted for presentations should be limited to one hour.

### 45 min Discussion among doctoral researchers, reviewers and rapporteur

*(Doctoral and postdoctoral researchers, student assistants, reviewers, rapporteur, representative from the state ministry, DFG Head Office staff)*

Immediately following the presentation, a discussion between reviewers, the rapporteur and the doctoral researchers should be held, addressing overall developments and progress made within the Research Training Group (professors should not participate). The rapporteur moderates the meeting.

### 1 hour Reviewers’ meeting

*(Reviewers, rapporteur, representatives from the DFG Head Office)*

### 1 hour Plenary discussion involving all members of the Research Training Group and representatives of the university administration

*(Doctoral and postdoctoral researchers, student assistants, participating researchers, representatives of the university administration, reviewers, rapporteur, representative of the state ministry, DFG Head Office)*
After the reviewers have identified open questions that need to be addressed, a meeting should be held in which reviewers can discuss these topics with members of the Research Training Group and the university. The discussion is moderated by the rapporteur. As not only research but also structural issues will be addressed, it would be particularly beneficial to include a member of the university administration in this part of the review. Please note that the participating official is welcome to address brief remarks to all review participants. This programme element should therefore be scheduled in advance and the schedule strictly adhered to. This discussion marks the end of the review for the majority of the participants.

2 hrs 45 min  Final reviewers’ meeting  
(Reviewers, rapporteur, representative of the state ministry if applicable, DFG Head Office)

In the final internal consultation meeting, the reviewers draft their recommendation to the Senate and Grants Committees on Research Training Groups. This recommendation serves as the basis for the final decision by the Senate and Grants Committees on Research Training Groups on whether funding for the Research Training Group should be continued.

End of the review

The spokesperson is unofficially notified of the reviewers’ recommendations to the DFG’s Senate and Grants Committees.

3. Organisational Preparations

Accommodations for participants from out of town

The DFG Head Office will reserve hotel rooms for reviewers, the rapporteur, and DFG Head Office staff who intend to stay overnight and will inform the participants accordingly. To facilitate planning, please inform the DFG Head Office of the review venue as early as possible. We would also welcome recommendations on suitable places to stay (such as a university guest accommodation or a hotel that has special arrangements with the university). Please note that the maximum rates under the German Travel Expenses Act must be observed.
Venues

As frequent “changes of scenery” often result in a loss of time, we request that you plan for only a limited number of venues with short distances between them. A meeting room is required for the internal consultations between the reviewers. A nearby seminar room would be suitable for the discussions with the Research Training Group. The poster presentations and, where applicable, the light lunch should also take place nearby. To facilitate planning, please inform us as soon as possible of the review venues and include a small map if possible.

Please list the exact venues in the schedule, which should be coordinated with the DFG Head Office early on, and include a small map if possible.

Handouts

Since some time will unavoidably pass between the completion of the proposal and the review, it is recommended that you prepare a handout for the reviewers listing the current doctoral researchers (cf. the table templates in the guidelines) and an updated list of publications (cf. the notes on the appendix to the report). It would be beneficial for reviewers if you would mark any changes made since the progress report. This handout should be provided in addition to the information given in the proposal. Furthermore, you have the option to submit the latest updates of these two lists before the committee session during which the decision on your proposal is made.

In addition, providing pin-on name tags and table nameplates for all participants and a printout of planned presentations by the Research Training Group has proven useful in the past.

*Please do not hesitate to contact us if you have further questions.*
V Guidelines on Requesting Additional Funding during the Grant Period

During an ongoing grant period, additional funding may be requested from the DFG for:

- replacement costs (cf. II.8.2 Module Replacements contained in the proposal instructions and DFG form 52.03);
  
  www.dfg.de/formulare/52_03

- the admission of additional professors to run the Research Training Group;

Note that a convincing supplemental proposal must be submitted describing the biographical sketches of the new researchers and their integration into the research and qualification programmes. In addition, justification of the need for additional funding is required. A Research Training Group is generally run by a group of up to 10 professors. If this number is exceeded due to the admission of new professors, special justification must be given.

To be eligible for new admission, the new professors must have come to the university in question within twelve months of submission of the supplemental proposal. Note that this does not apply to professors from universities of applied sciences who will be joining the Research Training Group for the first time; their admission is possible at any time.

- increasing the family allowance (cf. item 4.2.4.3. of the usage guidelines, DFG form 2.22, available in German only);

- supporting doctoral and postdoctoral researchers who, due to pregnancy or infant care, were unable to carry out certain tasks;

In such cases, funding provided for gender equality measures can be used to finance replacements or student assistants/technical support staff. Should this funding not be sufficient, additional funding may be provided in this case to support doctoral and postdoctoral researchers;

- the integration of refugee and at-risk scientists and scholars;

Integration in an established Research Training Group enables young refugees in particular to be supported during their doctoral phase. For more information on proposal submission, please refer to the details provided in the document “Information for Researchers, No. 17 of 18 April 2017”: 
knowledge transfer projects (cf. DFG form 54.06).

www.dfg.de/formulare/54_06/

Gender inclusion funding for the spokesperson (see DFG form 52.12)

If a new spokesperson assumes management of the RTG during the course of the funding period and this person’s gender is underrepresented at the managerial level in the relevant area or discipline, a written request for gender inclusion funding may be submitted at the same time the change of personnel is requested. The maximum amount available is proportionate to the remaining funding duration and according to when the transition has been completed, or, at the earliest, upon submission of the supplementary proposal.

www.dfg.de/formulare/52_12

Supplemental proposals must be submitted by the applicant university.

For additional information, please contact the DFG Head Office.
