## 1 General Information

- Name of the consortium

FAIRmat – FAIR Data Infrastructure for Condensed-Matter Physics, and the Chemical Physics of Solids

- Research domains or research methods addressed by the consortium

FAIRmat builds an infrastructure for Findable, Accessible, Interoperable, and Reusable (FAIR) data in **condensed-matter physics** (DFG Review Board 307) and **the chemical physics of solids** (DFG Review Board 304). It establishes a research data management (RDM) service for collecting, organizing, sharing, analyzing, and publishing FAIR data across **synthesis, experiment, theory, and computation**.<sup>1</sup> We demonstrate the use of RDM on **batteries, solar cells, catalysis, metal-organic frameworks, and biophysical materials**. We also enable progress in materials informatics through the use and development of Artificial Intelligence methods. Due to conceptual overlaps between different domains and the generality of our approach, FAIRmat inherently impacts other physical sciences and interdisciplinary sub-domains, e.g., materials science and chemistry, thus benefiting engineering, industry, and society.

- URL of the consortium website and repositories used for publishing output

Name	Description	Link
FAIRmat	Website of the consortium	<a href="https://www.fairmat-nfdi.eu/fairmat">https://www.fairmat-nfdi.eu/fairmat</a>
NOMAD	NOMAD's services website	<a href="https://nomad-lab.eu/nomad-lab">https://nomad-lab.eu/nomad-lab</a>
NOMAD	Archive and Repository, dedicated to publishing and exploring data	<a href="https://nomad-lab.eu/prod/v1/gui/search/entries">https://nomad-lab.eu/prod/v1/gui/search/entries</a>
FAIRmat GitHub organization	A collection of open-source code repositories from FAIRmat	<a href="https://github.com/FAIRmat-NFDI">https://github.com/FAIRmat-NFDI</a>
FAIRmat community on Zenodo	A collection of presentations, posters, guides, newsletters, and other outputs from FAIRmat members and the community	<a href="https://zenodo.org/communities/fairmat_nfdi">https://zenodo.org/communities/fairmat_nfdi</a>

## 2 Summary

FAIRmat started with the goal of supporting condensed-matter physics and the chemical physics of solids with **a single integrated, extensible, distributed FAIR RDM service**. This vision has been implemented in our data infrastructure NOMAD.<sup>2</sup> What began as a repository for publishing *ab initio* calculations,<sup>3</sup> has been turned into a comprehensive RDM service covering (1) the definition of data schemas, (2) the data acquisition from a wide range of sources, (3) the processing of files into structured and reusable data, (4) the sharing of data across research institutions, and (5) the analysis of data. FAIRmat enables the community to build a network of interconnected NOMAD instances, called Oases, that balance the use of local resources, customizable services, and data privacy on the one hand with easy collaboration, ready-made tools, and data sharing on the other. **Figure 1** shows key components and figures.

NOMAD is built on **structured data based on well-defined schemas**. It not only captures shallow user-provided metadata, such as authors, dates, or keywords, but also automatically extracts deep metadata, including parameters, settings, measurements, logs, workflows, and analysis results. NOMAD extracts more than 8,100 different quantities, with new plugins being developed continuously. This approach has allowed us to provide support for over **141 file formats** of specific instruments and simulation codes, add data from **multiple external databases** (Materials Project, Aflow, OQMD, EELS, and HTEM), support community-relevant **data standards** (OPTIMADE, NeXus, .eln, ...), and offer electronic lab notebook (**ELN**) **data import** (eLabFTW, Chemotion, LabFolder, and openBIS). Since all data are processed and uniformly structured, we can also offer a comprehensive suite of **visualization, machine learning, and Artificial Intelligence tools**. All tools are containerized and run directly in any browser.

Since research is highly diverse and specialized, all schemas, data, and tools need to be highly specialized as well. Therefore, FAIRmat selected relevant research and application subdomains and created corresponding **NOMAD plugins** and **datasets**. These demonstrate the impact of our FAIR and structured approach and convince communities to invest in and adapt our solutions for other domains. For example, we have built the **NOMAD perovskite database**, which contains 43,000 solar cells, originally curated from “un-FAIR” data published in thousands of papers. Now, all solar cells can be explored from a single interface with hundreds of filters and

interactive statistics. All metadata are consistent, and researchers can even add newly reported solar cells. Other notable examples include a database of 13 million DFT calculations; a database of 17,000 metal-organic frameworks (MOFs); a framework for managing and exploring data from heterogeneous catalysis; an atom probe tomography dataset curated from files published on Zenodo and standardized in the NeXus format; plugins supporting synthesis workflows from leading national and international laboratories, including the Leibniz-Institut für Kristallzüchtung, the Helmholtz-Zentrum Berlin, and the Technical University of Denmark; measurements from popular instruments from vendors such as Bruker, Malvern Panalytical, or Thermo Fisher Scientific; and our integrated lab automation software, NOMAD CAMELS. All of these examples typically come with dedicated schemas, parsers, and normalizers for processing the respective files, visualization, analysis tools, and published datasets.

FAIRmat invests heavily in training the scientific community to appreciate the value of FAIR data by providing comprehensive online tutorials and user training, reaching out to academia and companies at conferences and dedicated workshops, and by deploying specially configured NOMAD Oasis installations to enable digitalization of practical courses at universities.

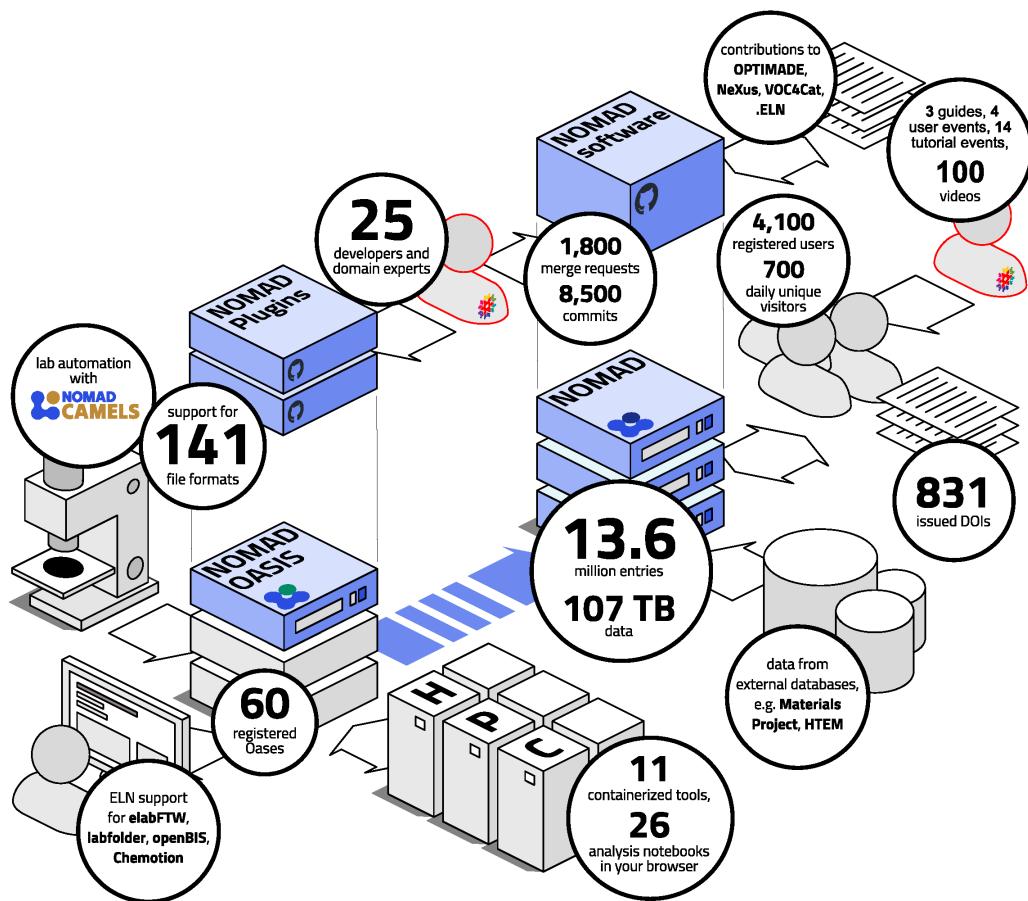

Figure 1: The integrated, extendable, and distributed RDM service NOMAD developed by FAIRmat.

### 3 Composition of the Consortium

- Applicant institution

Applicant institution	Location	Duration
Humboldt-Universität zu Berlin (HU Berlin)	Berlin	10/21-09/26

- Spokesperson

Spokesperson	Institution, location	Duration	ORCID-ID
Claudia Draxl	HU Berlin, Berlin & FAIR-DI e.V., Berlin	10/21-09/26	<a href="https://orcid.org/0000-0003-3523-6657">https://orcid.org/0000-0003-3523-6657</a>

- Co-applicant institutions

Co-applicant institutions	Location	Duration
Leibniz-Institut für Kristallzüchtung (IKZ)	Berlin	10/21-09/26
Max Planck Institute for Chemical Energy Conversion (MPI-CEC)	Mühlheim/Ruhr	10/21-04/22
