

Cultural Climate Models

Co-PIs: David Higgins (Leeds), Julia Hoydis (Graz)

About the research

- Investigates how texts model climate futures by exploring scenarios and engaging in ethical debates
- Collaboration between Cologne, Duisburg-Essen, Graz, and Leeds
- Methods include literary analysis, arts-based research, linguistics, and digital analysis of social media

How this will make a difference

- Highlights the value of interdisciplinary humanities and social science approaches to climate modelling
- Brings individual experience, care, cultural values, and social justice into discussions of climate futures

Areas of focus

- Modelling posterity in literary drama and essays
- The language and visuals of climate futures on social media
- Educational discourse on the modelling potential of climate fiction
- Exploration of the project's datasets through artistic practice
